**TOPOLOGY DESIGN PRINCIPLES**

**TOPOLOGY CONCEPTS FOR SHAREPOINT 2013 PREVIEW**

**Overview**

The roadmap has three tiers of a Microsoft SharePoint 2013 Preview. Each tier can be deployed on a single server for evaluation or development, on three servers, or utilizing virtual server technology.

- **Single server role:** Web server and Index server. This tier is ideal for a Startup farm. It includes: Web server, Index server, and possibly crawl server. Both A and B hosts include the crawl server.

- **Three server role:** Web server, Index server, and Crawl server. This tier is suitable for a Small farm that includes a crawl server. It includes: Web server, Index server, crawl server, Application server, and Analytics Reporting server.
